TT TABLELIST **PRO**

tablelist integration

our integration with **tablelist** allows your customers to book a time they can visit your dispensary to pick up or purchase items

one benefit of using this integration is that customers joining your **springbig texting and loyalty program** via **tablelist** will be prompted to provide their signature in order to confirm their enrollment. this works similarly to the **custom join form** or the **e-sig color application**. it allows you to ensure you're only capturing members who have explicitly consented in joining your program

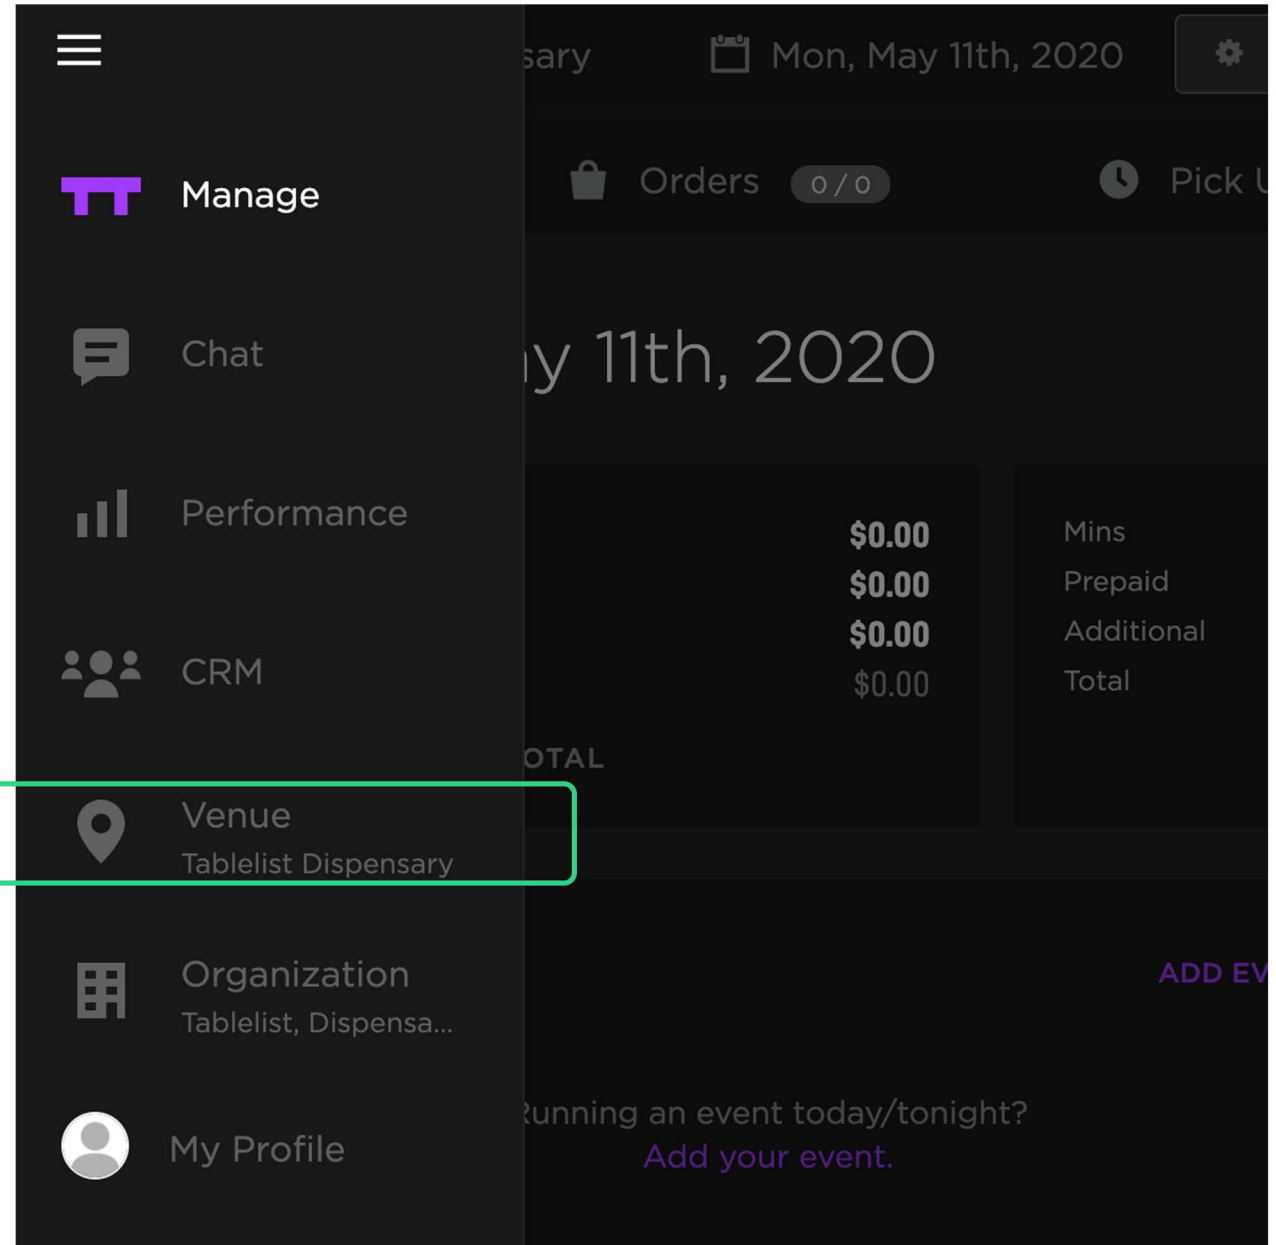

step 1.

to start the integration, first you will need to contact your **springbig client success manager** to schedule the integration. upon scheduling, we will provide you with your **springbig API Key**, which you will need to connect to your **tablelist** account

tablelist integration: venue options

step 2.

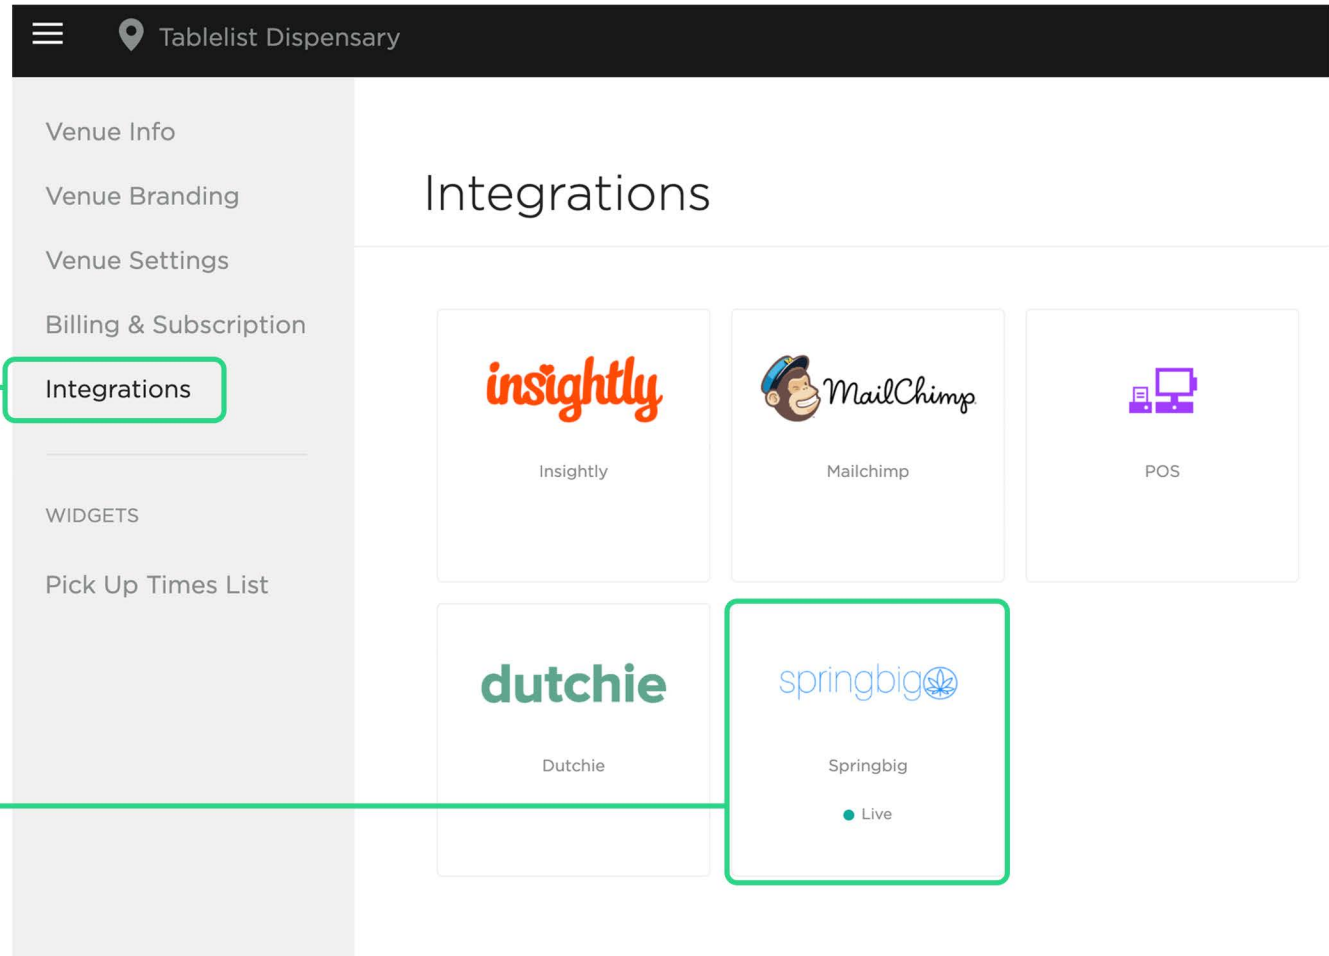

next, from your
tablelist dashboard
navigate to the sidebar
and select '**venue**'

tablelist integration: select springbig

step 3.

within the venue options select
'integrations'

step 4.

from this page, select
the 'springbig' option

tablelist integration: enable API Key

step 5.

toggle the **'enable'** button to enable the integration

step 6.

enter the **API Key** provided by **springbig** into the space available

step 7.

make sure to hit the **'save'** button to keep those changes

tablelist integration: customer experience

wonderful! the integration is enabled! now when a customer creates an order with your dispensary using **tablelist**, they will be prompted to fill out a form to include their contact information and to select a date and time to visit the dispensary

the customer will enter their contact information, including:

- 📍 name
- 📍 birthday
- 📍 email
- 📍 phone number

note: springbig will only receive contact information for members that select the checkbox labeled **'I'd like to join the loyalty program'**

once the checkbox is selected, the customer will be prompted to provide a **digital signature** then they can **'complete'** the scheduling process
